

CDIT QC Investigations Extension for Kofax Capture

Perform document indexing and validation functions directly from within the Kofax Capture Quality Control module

The CDIT Quality Control (QC) Investigations Extension for Kofax Capture allows Kofax Capture operators to validate and correct key metadata on documents from within the Kofax Capture Quality Control module. Visible in the Quality Control module as an additional panel, the QC Investigations Extension provides operators with the ability to quickly perform data indexing quality checks, including editing, copying and saving index field data.

While the “out-of-the-box” functionality of the Kofax Capture Quality Control module is geared towards error identification and resolution of erroneous documents, it only provides image manipulation capabilities. The CDIT QC Investigations Extension is a valuable addition to the Kofax Capture workflow process as it allows investigations on document index data to be performed outside of the Validation module.

Key Features and Capabilities

When a document is selected in the Batch Contents panel in QC, all available indexed values for that document are immediately populated in the QC Investigations Extension panel.

The CDIT QC Investigations Extension adds a number of additional functions to the Quality Control Module to facilitate the validation and correction of index data for documents rejected to QC. These functions include:

- Index fields containing the associated metadata for each document-level field in the current batch class;
- Copy button, which allows the copying/pasting of data into another field;
- Reset button, which reverts data back to the previous value;
- Save button, which updates and saves the new index field value.

About CDIT

CDIT Inc. is Canada's leading Enterprise Capture Consultant/Integrator. We are focused on accelerating the CAPTURE, TRANSFORMATION, DELIVERY and EXCHANGE of critical information that is an essential part of every organization.

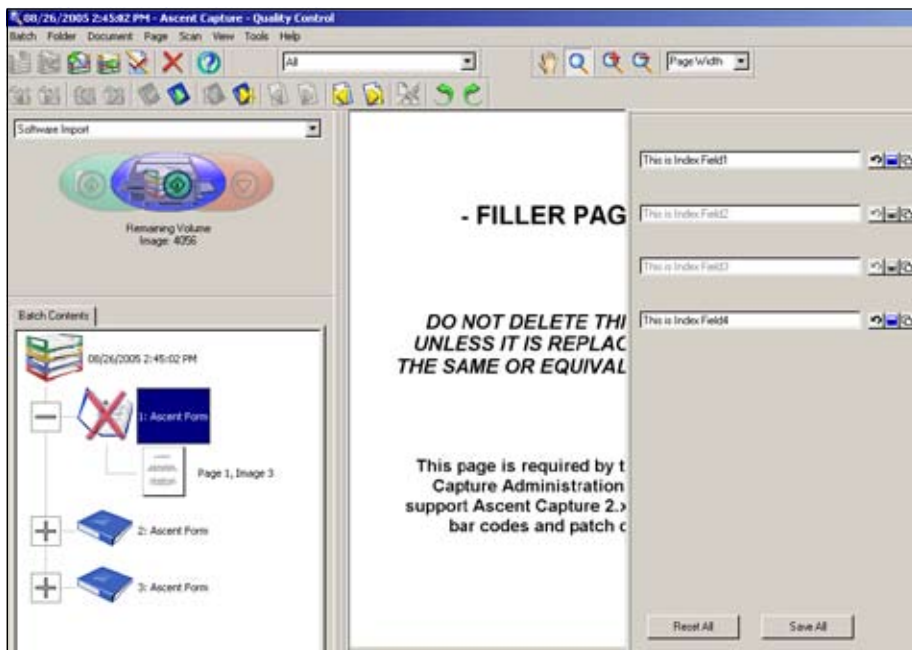

We work with leading organizations to define, architect, supply and implement innovative ECM Solutions to help reduce operational costs as well as enhance competitive positioning. These solutions update the capture, transformation, delivery and exchange of critical information that drives our clients' business processes. Our unmatched combination of solutions and technologies improve the speed, cost, accuracy and efficiency of business transactions by enabling organizations to receive and exchange information automatically with anyone, anywhere, in any format. These solutions work directly with the business applications and IT platforms that workers already know and use.

The CDIT QC Investigations Extension also integrates with the Kofax Capture Administration module. The Extension is available at the document level of each batch class and provides the administrator with the ability to set statuses, including Read Only, Read/Write or Hidden, for each index field to be made available in QC.

Kofax Capture Support

The CDIT QC Investigations Extension has been certified for use with Kofax Capture v7.x - v9.
